

PARISE CHAITANYA KRISHNA SANDEEP

B. Tech Computer Science student

✉ parisesandeep27@gmail.com ☎ 9505369701 📍 Vijayawada, India

🌐 linkedin 🐙 github

Profile

Final-year B. Tech Computer Science student graduating 2026 with 8.7 CGPA. Experienced in Python, SQL, and building data-driven applications. Demonstrated ability to analyze patterns, interpret user behavior, and deliver accurate outputs under quality standards. Strong communicator and fast learner with hands-on team and client-facing project experience.

Work Experience

11/2025 – 04/2026
chennai

Vcodez

Python Full Stack Developer Intern

- Interpreted usage patterns and user behaviour data to identify bugs and optimise feature performance
- Documented processes and maintained accurate code logs — ensuring zero knowledge gaps during team handovers

Education

08/2022 – Present
Chennai

B. Tech — Computer Science

Bharath Institute of Higher Education and Research

- CGPA: 8.7 / 10.0 (Consistent academic performer across all semesters)

2020 – 2022
Vijayawada

Class XII

Sri Chaitanya Jr College

- CGPA: 57.5%

2019 – 2020
Tiruvuru

Class X

Sri Chaitanya School

- CGPA: 99.8%

Skills

Analysis

Python, SQL / MySQL, Excel, pattern recognition

Dev Tools

React.js, Git, GitHub, REST APIs

Soft Skills

Attention to detail, communication, research, quality standards, team collaboration, problem solving

Languages

Telugu

Native

English

Fluent

Certifications

Android Developer Virtual Internship

Google Developers, AICTE & Edu Skills | Jul-Sep 2024

JavaScript, PHP & Python Programming

Proper Dot Institute, Udemy | Apr 2025

HTML5, React.js, Node.js, Angular 2.0 & CSS

Hacker Rank Certified

Projects

Emotion Detection Web App

Python · Streamlit · Hugging Face

- Analysed real-time user behaviour streams across 500+ test inputs; achieved 88% classification accuracy
- Built automated CSV export and history-tracking system — eliminating manual data recording effort by ~100%
- Applied critical thinking to identify and correct 3 model bias patterns that were skewing results

Marrow-Find — AI-Powered Leukaemia Detection System

Python · ResNet50 · Flask · React · cGAN

- Final year capstone project: end-to-end automated ALL leukaemia detection from bone marrow microscopy images, eliminating the 45-90-minute manual diagnosis bottleneck and reducing 20% inter-observer variability
- Built cGAN-based augmentation pipeline generating 5,000 synthetic blast cell images to correct class imbalance; integrated Watershed segmentation for automated per-field blast cell counting and nucleus-to-cytoplasm ratio extraction
- Implemented Grad-CAM explainability layer producing colour-coded heatmaps over predicted cells — giving pathologists transparent morphological evidence behind every AI decision
- Delivered structured PDF diagnostic reports via Flask REST API within 2-3 seconds of image upload; integrated an educational AI chatbot for clinical context
